## **Project Design Phase-II Customer Journey Map**

Date	03 October 2022
Team ID	PNT2022TMID10433
Project Name	Natural Disasters Intensity Analysis And Classification Using Artificial Intelligence
Maximum Marks	4 Marks

## **CUSTOMER JOURNEY MAP**

## Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

As you add steps to the experience, move each these. This left or right depending on the scenario you are documenting.

					g on the scenario ocumenting.
Natural disasters intensity analysis and classification using Al	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) typically experience?	Users become aware of the AI model through advertisements and social media  Users become aware of this model through the government and nature protecting agencies	Video frames captured for the intensity analysis  Classification and prediction results of the disasters	Classifies the natural disaster and tells the intensity of disaster of disaster.	Determination of the nature and to alert people if octent of disaster and octent of disaster disaster is predicted	Establishing link with government and organizations for Mitigation Actuating Systems
Interactions What interactions do they have at each step along the way?  = People: Who do they see or talk to?  = Places: Where are they?  = Things: What digital touchpoints or physical objects would they use?	Interaction with people who are familiar with product	Use of hardware on- screen interfaces to communicate	Interaction with scientists and disaster analysers monitoring	Communicate their feedback to service providers  Contact the helpfilme in case of disaster detection	Interaction with the government agencies for taking appropriate for taking appropriate spread awareness
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me" or "Help me avoid")	Simple user friendly UI  To gain knowledge in the field of natural disaster classification	To make full use of the functionality of the model	Improved response time  Accurate prediction	Examining the numbers of fetalities, injuries	Ensuring better service to on feedback provided
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, deligniful, or exciting?	Motivated to save human and and calculations for disaster classification	Delightful user interface experience learning and table learning and t	Designing light weight Web Application of model	Periodic forecasting Without interruption to climates	Examining the financial dismage caused Implementing Helpline, Avarences and Threshold Actuating Systems
Negative moments What steps does a typical person find frustating, confusing, angering, costly, or time-consuming?	Time consuming Complexity of algorithms	Fear of losing data  Costly hardware and software components	Collection of large set of data is time consuming Frustation due to long duration of training of model	Failure due to technical issues Anger due to some error in resuts	Examining the false triggering and correcting it
Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Increased brand loyalty Advertising the model to public	Betterment of accuracy in prediction Retrieval of Training and testing data	Designing light weight Web Application Addition of more number of data	Optimizing the AI Model with respect to real world environment	Maximizing the uptime of the Web App Service Examining the false triggering and correcting it
